# What is Masarak?

Masarak is built in the UK by founders with PhDs and extensive teaching experience, with one clear goal: equip students to stand out through guided project-based learning (PBL). At Masarak, students move beyond foundational study to produce evidence-based outputs that reflect intellectual maturity, initiative, and talent.

Through Masarak's 3-phase program, students work closely with mentors from the world's top universities to develop the soft skills that matter most in today's world: the ability to frame strong questions, conduct credible research, solve complex problems, test ideas carefully, and present work with clarity and confidence. They turn these skills into tangible outputs that showcase their abilities and put them ahead in competition for top universities and scholarships.

# Meet the founders

## Dr. Samer Abdelmoeti

- **PhD in Engineering** from the University of Cambridge
- **Sr. Specialist at McLaren Racing** - leading the motion control development of the Formula 1 racing simulator
- **10 years of research experience** in industry and academia

## Dr. Samuel Gabra

- **MPhil and PhD in Energy Engineering** from the University of Cambridge
- **Technical Director at the University of Cambridge's** Aviation Impact Accelerator aiming to decarbonise aviation
- **Over 10 years of teaching** and supervision experience

## Dr. Omar Salem

- **PhD in Inflammation & Cancer Biology** from the University of Edinburgh
- **EMBA** from Hult International Business School
- **Senior Scientist** with prior roles at Mestag Therapeutics, InvoX Pharma and Artios Pharma
- **7+ years of combined teaching**, academic and industrial research

## Dr. Abdelhamid Yousef

- **PhD in Pharmacology** from the University of Cambridge
- **Strategy consultant at ZS Associates** consulting firm, supporting pharmaceutical and life science companies
- **6 years' experience in teaching** and academic supervision

# What is the problem that Masarak is addressing?

## The problem

**1. Admissions are brutally competitive**

Oxford alone receives over 23,000 applications for about 3,300 undergraduate places each year

**2. Top universities assess more than grades**

Cambridge asks applicants to show **critical thinking, analytical skills, curiosity, and subject exploration beyond school**

Oxford interviews assess the ability to **think independently and engage with new ideas beyond the syllabus**

MIT looks for **collaboration, initiative, and hands-on creativity**

## The gap ..is simply proof

The qualities elite universities screen for are hard to demonstrate through marks alone unless students can point to a serious piece of research, analysis, or build work

## How Masarak addresses it

**PBL produces stronger outcomes and visible evidence**

..this creates a stronger story for interviews, and personal statements, especially when universities value exploration beyond school

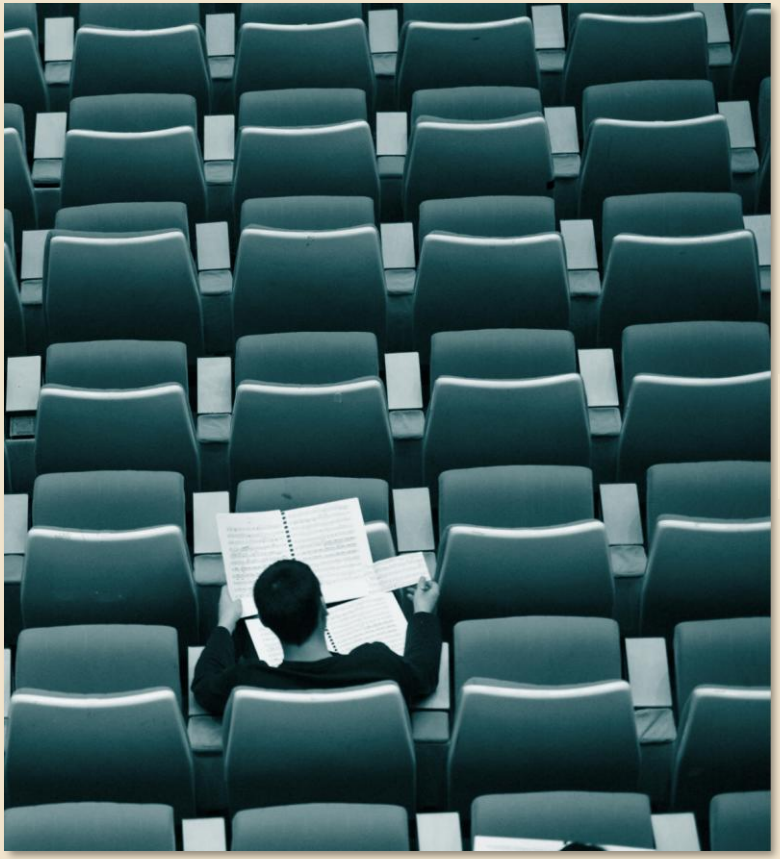
**PBL shows you were able to frame a question, build a solution, evaluate evidence, and defend conclusions**

..this directly builds the critical thinking and curiosity that Cambridge and Oxford explicitly assess

**PBL is evidence of collaboration, ownership, and curiosity**

..this aligns closely with MIT's emphasis on collaboration, initiative, and hands-on problem solving, and with what employers now value

# Why Masarak is different?



1

## Founders

Founders have **studied, taught, mentored, and designed high-quality programmes at top universities**, with proven outcomes across admissions, publication, undergraduate supervision, and access to top tutors from leading UK universities.

2

## Program

**Project-based learning (PBL) from day one.** Students tackle a real problem and produce a concrete output, such as a prototype or research paper. PBL has measurable impact: over one school year, students in project-based learning made the equivalent of **five to six extra months of progress in social studies** and **about two extra months in reading**. It also builds **analytical thinking**, the **top core skill** employers now seek, with **7 in 10 companies** calling it essential.

# Founders | Our achievements in numbers

## Between the founders, we:

Helped **40** students secure admission to top universities

Supervised >**450** students in Cambridge and Edinburgh

Delivered **15** courses to high-school students in EU, US, China

Published **18** peer-reviewed Publications

# The program runs in three clear phases*

## SPARK

Choose a real-world problem you enjoy solving

## BUILD

Develop a real solution grounded in evidence

## SHOWCASE

Present your work with clarity and confidence

*The duration and number of sessions can be decided according to the student's needs

# Phase I - SPARK | Students find a strong project to build

## Goals

**Find direction**
Students explore interests through guided learning, case studies, and reflection so they can identify what genuinely excites them

**Learn core soft skills and tools**
Students build foundations in research, critical thinking, question framing, and academic writing as well as core software tools

**Commit to a real project**
By the end of the phase, each student has a clear project idea, a build plan, and a validation approach

## Approach

1. **Kickoff and orientation**
   Introduction to the program, tutors, and course
2. **Core theory sessions**
   Foundational concepts, guided discussions, short case studies, and quick application exercises
3. **Problem framing**
   Students define the problem, context, constraints, and 1-2 measurable success indicators for the project
4. **Research basics and critical thinking**
   Credible sources, citations, basic methodology, data reliability, ethics, and differences between argument, opinion, summarization, and synthesis
5. **Writing lab**
   Clear writing structure, logical flow, and transitions
6. **Project plan**
   Goals, methodology, tools, validation process, and expected outcome

مسارك
Masarak

# Phase II - BUILD | Students create, test, and refine

## Goals

**Build the main project output**
Develop a research-based output such as a prototype / implemented solution or a publication, depending on the type of project

**Validate the output**
Students run the validation method chosen in Spark and run validation, capture results, and improve the work through iteration

**Document clearly**
Students write up methods and results clearly, connect their findings to evidence, and keep a clean record of progress and reasoning

## Approach

1. **Build Sprint**
   Prototype or implement the solution, or draft and refine a research output. The expected output is already tangible by this point

2. **Evidence Sprint**
   Run the validation approach selected in Spark and capture the evidence in a structured way

3. **Writing Lab**
   Interpret results carefully, write Methods and Results clearly, integrate sources into a coherent argument, and connect findings back to the literature

4. **Iteration and Documentation**
   Refine the project based on the evidence and produce a build log and decision log that record changes, rationale, and progress

مسارك
Masarak

# Phase III - SHOWCASE | Students create, test, and refine

## Goals

**Polish the final project and report**
Students finalize the report, tighten the language, fix logic gaps, and clean up citations so the work is academically credible and presentation-ready

**Present and defend the work**
Students learn to deliver a concise pitch and respond to challenging questions with structure, composure, and clarity during live Q and A

**Turn the project into a strong application story**
Students convert the project into evidence-based CV bullets, personal statement material, and interview answers linked directly to the program

## Approach

1. **Academic report polish**
   Finalize the report, strengthen logic, improve language, and clean citations

2. **Pitch + public speaking + Q and A**
   Deliver a concise 2-minute demo pitch followed by live Q&A. Students practice structured, confident responses and learn to handle challenging questions under time pressure

3. **Application pack build**
   Develop an application pack and an interview answers bank shaped around what top admissions interviews test: clarity of thinking, evidence, and reflection. The plan also includes mock interviews modeled on top universities' formats
